WOODS FROM OTHER TIMES

CEDRIA PACIFIC provides a unique vintage finish to wood, typical of the "passage of time", and a beautiful aged and silvery aspect, very common in woods exposed to the Pacific's climatology.

The microporous structure of this water-based wood stain creates a very beautiful natural semi-matte patina that lets the wood breathe while protecting it from the most

aggressive weather conditions and prevents stains caused by water and air pollution.

The aged appearance obtained after the first application lengthens the frequency of maintenance and the useful life of the wood.

A range for those who appreciate the beauty of the passage of time in noble materials

CEDRIA DEKOR LASUR

Protects and decorates
with 18 different colours
